Aero Grow 19

Flexible and economical - the solution for the future

Regardless of the needs and the applied size, the

Aero Grow 19

can perfectly be adapted to every challenge.

The know-how and the advantages of this technology make the handling easy and flexible.

By usage of the Aero Grow pots, the modern grower abandons any medium and thus he dispenses with follow-up costs.

In this revolutionary new type of cultivation, the entire root zone is irrigated by a circulating liquid fertilizer.

The roots of the plant absorb the nutrients through the irrigation, p. ex. a sprayer.

The roots develop in the layers of the grid and are perfectly provided with oxygen (CO₂) and nutrients.

The constant exchange of fresh oxygen and circulating nutrients optimizes and maximizes the root zone.

This results in accelerated growth of the plant and in increasing yield !

As the Aero Grow 19 does not need any medium, potting and repotting can be made quicker and cleaner than usual.

Made in Germany

Advantages appreciated by the expert:

- Visible root chambers for controlling the root zone
- Economical due to reusability
- Applicable for amateurs and professionals
- All materials are opaque and UV-resistant

Also available as a 100% compostable material.

Aero Grow 19 Version 1 (V1)

with Neoprene grafting in lid

Aero Grow 19 Version 2 (V2)

without Neoprene grafting in lid
